# CAS CS 111: Introduction to Computer Science I

Boston University, Spring 2018

# **Syllabus**

**Description:** The first course for computer science majors and anyone seeking a rigorous introduction. Develops computational problem-solving skills by programming in the Python language, and exposes students to variety of other topics from computer science and its applications.

Prerequisites: none

#### Instructors

A1/C1: David G. Sullivan, Ph.D. (dgs@cs.bu.edu, PSY 228D, 64 Cummington Mall) B1: Christine Papadakis-Kanaris (cpk@cs.bu.edu, PSY 228B, 64 Cummington Mall) See the course website for the schedule of instructor, TF and CA office hours.

## Teaching Fellows/Assistants (TFs/TAs)

Nathan Cordner (ncordner@bu.edu) Eli Saracino (esaracin@bu.edu) Jiayu Zhang (jyz16@bu.edu) Xiao Zhou (zhouxiao@bu.edu)

### Course Assistants (CAs)

We are fortunate to have a number of undergraduate course assistants (CAs) as members of the course staff. They will be working with you in the labs and holding office hours each week. See the course website for their names and contact information, and for the schedule of office hours.

### **Meeting Times and Places**

lectures: section A1: MWF, 10:10-11:00 am, CAS 522 section B1: MWF, 11:15 am-12:05 pm, CAS 224 section C1: MWF, 12:20-1:10 pm, KCB 101

lab: a weekly, one-hour session; see your schedule for the time and location *Important:* You must also be able to take the midterm exams, which will be held on two Wednesday evenings (2/28 and 4/4) from 6:30-7:30 p.m. We will *not* meet on any other Wednesday evenings.

Course Website: <a href="http://www.cs.bu.edu/courses/cs111">http://www.cs.bu.edu/courses/cs111</a>

### Requirements and Grading

- 1. Weekly problem sets and final project (40% of the final grade)
- 2. Exams: two midterm exams (20%) and a final exam (30%)
- 3. Preparation and participation (10%)

To pass the course, you must earn a passing grade for each of these three components.

## **Collaboration Policy**

You are strongly encouraged to collaborate with one another in studying the lecture materials and preparing for quizzes and exams.

Problem sets will include two types of problems:

- *individual-only* problems that you must complete on your own
- *pair-optional* problems that you may complete alone or with a partner.

For both types of problems, you may discuss ideas and approaches with others (provided that you acknowledge this in your solution), but such discussions should be kept at a high level, and should not involve actual details of the code or of other types of answers. **You must complete the actual solutions on your own** (or, in the case of a pair-optional problem, with your partner if you choose to use one).

Rules for working with a partner on pair-optional problems:

- You may *not* work with more than one partner on a given assignment. (However, you are welcome to switch partners between assignments.)
- You may *not* split up the work and complete it separately.
- You must work *together at the same computer* for every problem that you complete as a pair. While you are working, the screen should be visible to both of you. One person should type, while the other person observes, critiques, and plans what to do next. You should switch roles periodically, and your solution should be a true collaborative effort.
- You must *both* submit the same solution to each problem that you did as a pair, and you must clearly indicate that you worked on the problem as a pair by putting your partner's name at the top of the file.

#### Academic Misconduct

We will assume that you understand BU's Academic Conduct Code: <a href="http://www.bu.edu/academics/policies/academic-conduct-code">http://www.bu.edu/academics/policies/academic-conduct-code</a>

Prohibited behaviors include:

- copying all or part of someone else's work, even if you subsequently modify it; this includes cases in which someone tells you what you should write for your solution
- viewing all or part of someone else's work (with the exception of work that you and your partner do together on a pair-optional problem)
- showing all or part of your work to another student (with the exception of work that you and your partner do together on a pair-optional problem)
- consulting solutions from past semesters, or those found online or in books
- posting your work where others can view it (e.g., online).

Incidents of academic misconduct will be reported to the Academic Conduct Committee (ACC). The ACC may suspend/expel students found guilty of misconduct. At a minimum, students who engage in misconduct will have their final grade reduced by one letter grade (e.g., from a B to a C).

#### Other Policies

Late problem sets: Problem sets must be submitted by the date and time listed on the assignment (typically by 11:59 p.m.). There will be a 10% deduction for submissions up to 24 hours late. **We will not accept any homework that is more than 24 hours late.** Plan your time carefully, and don't wait until the last minute so you will have ample time to ask questions and obtain assistance from the course staff.

*Pre-lecture preparation:* To help you prepare for lecture, you will typically be required to complete an assigned reading and/or watch one or two short videos. You will also be required to perform some type of brief task (an online quiz or other exercise) to demonstrate that you have completed the necessary preparation. Your work on these tasks will not typically be graded for correctness, but it should demonstrate that you have adequately prepared for lecture. The pre-lecture tasks must be submitted by the specified date and time. **Late pre-lecture work will not be accepted**.

The attendance/participation portion of your grade will be based on your consistent attendance at the lectures and lab sessions, and on your participation in the activities for each class. In particular, you must participate in small-group activities during lecture in which you will discuss questions with other students and "vote" on the answers. These activities are designed to deepen your understanding of the material, and you will be graded on your participation, not on the correctness of your answers. To accommodate unavoidable absences or lateness, you will receive full credit for attendance as long as you make at least 85% of the votes over the course of the semester and attend 85% of the lab sessions. Voting for someone else is not allowed, and will result in a lowering of the participation grade of both of the students involved.

The final exam will replace your lowest problem-set grade if doing so helps your final grade. (The final-project grade *cannot* be replaced.) The final exam will also replace your lowest midterm-exam grade if doing so helps your final grade.

The final grades are *not* curved. The performance of the class as a whole is taken into account when assigning letter grades, but this can only improve your grade, not harm it.

Extensions and makeup exams will only be given in *documented* cases of serious illness or other emergencies.

You cannot redo or complete extra work to improve your grade.

Incompletes will not be given except in extraordinary circumstances.

### **Course Materials**

Textbook: We will use the free online textbook CS for All by Christine Alvarado, Zachary Dodds, Geoff Kuenning, and Ran Libeskind-Hadas. It can be found here: <a href="http://www.cs.hmc.edu/csforall/index.html">http://www.cs.hmc.edu/csforall/index.html</a>

*In-class software:* We will be using the Top Hat platform for in-class activities and attendance. More detail will be provided in class.

Schedule (tentative)

	le (tentative)	tonics around assist dates
week	lecture dates	topics, exams, assignments, and special dates
0	1/19	Course overview and introduction
		Computational problem-solving with Picobot
_	1/00 1/04 1/00	No labs this week.
1	1/22, 1/24, 1/26	Getting started in Python
		Data types and expressions
		Strings and lists
		A first look at functions
		Making decisions (conditional execution)
_		Problem Set 0 (all) due on 1/28
2	1/29, 1/31, 2/2	Functions (cont.)
		Local and global variables; the runtime stack
		Recursion
		1/31: last day to add a class
		Problem Set 1, part I due on 2/1
		Problem Set 1, part II due on 2/4
3	2/5, 2/7, 2/9	Higher-order functions and list comprehensions
		Recursive design
		Lists of lists; encryption and decryption
		Problem Set 2, part I due on 2/8
		Problem Set 2, part II due on 2/11
4	2/12, 2/14, 2/16	Algorithm design
		Representing information
		Problem Set 3, part I due on 2/15
		Problem Set 3, part II due on 2/18
5	<b>2/20</b> , 2/21, 2/23	Digital logic and circuit design
		No lecture on 2/19 (Presidents' Day)
		Lecture on 2/20 (Mon. schedule)
		No labs this week.
		2/22: last day to drop without a 'W'
		Problem Set 4, part I due on 2/22
_		Problem Set 4, part II due on 2/25
6	2/26, 2/28, 3/2	Digital logic and circuit design (cont.)
		Assembly language
		Midterm 1 on 2/28 from 6:30-7:30 pm
		Spring break
7	3/12, 3/14, 3/16	Assembly language (cont.)
		Loops and imperative programming
		Cumulative computations
		Problem Set 5, part I due on 3/15
		Problem Set 5, part II due on 3/18

9 3.4 10 4.4 11 4.4	7/19, 3/21, 3/23 7/26, 3/28, 3/30 7/2, 4/4, 4/6	Nested loops Design using loops References; mutable vs. immutable data Problem Set 6, part I due on 3/22 Problem Set 6, part II due on 3/25 2-D lists Object-oriented programming File processing Classes: creating your own types of objects 3/30: last day to drop a class with a 'W' Problem Set 7, part I due on 3/29 Problem Set 7, part II due on 4/1 Classes: creating your own types of objects (cont.) 11 4	/2, 4/4, 4/6	Classes: creating your own types of objects (cont.) Dictionaries
11 4	, i, i, i, i	Dictionaries
		Midterm 2 on 4/4 from 6:30-7:30 pm
		Problem Set 8 (all) due on 4/8
	/9, 4/11, 4/13	Games and AI
10 4	70, 411, 4110	Overview of the final project
10 4		Problem Set 9, part I due on 4/12
10 4		Problem Set 9, part II due on 4/15
	/18, 4/20	Finite-state machines
12 1	710, 4/20	No lecture on 4/16 (Patriots' Day)
		Labs will be held; Wed. is a Monday schedule
		Problem Set 10, part I due on 4/22
13 4	/23, 4/25, 4/27	Finite-state machines (cont.)
		Turing machines
		Algorithm efficiency and problem "hardness"
		Problem Set 10, part II due on 4/26
14 4	/30, 5/2	Problem "hardness" (cont.)
		Wrap-up
		Final project due on 5/1
