CS698 Homework: Peer Teaching
Due: in-class on WED 9/19/12

You will prepare to tutor a student one-on-one for one of the following topics:

- Binary numbers (integers only)
- Basic logic gates
- Linked list or queue data structure
- Stack data structure
- Setting Unix file permissions

Assume that you are a logical-mathematical learner, but the person you will be tutoring is a visual-spatial learner (i.e. foreign to you). Devise a plan to explain your topic in this foreign learning style. Come prepared to demonstrate your idea on Wednesday 9/19.

Also, please submit in writing your outline, about ½ to 1 page.
