CS 235 Spring 2010

Assignment 3

Date Due: Thursday, February 18

Reading: Read Chapter called Rings and Fields (Chapter 7 or Chapter 8 depending on which edition of the text you have)

Problems:

- 1. Solve for x in $81x = 1 \pmod{43}$
- 2. Find inverses of 2, 4, 5, and 7 in Z_{11} .
- 3. Which elements in Z_{14} have inverses ? Find the inverses in each case.
- 4. Let a, b, n, $k \in \mathbb{Z}$ with n, k > 0 and gcd(n, k) = 1. Show that $a \equiv b \pmod{n}$ and $a \equiv b \pmod{k}$ implies $a \equiv b \pmod{k}$
- 5. Prove that for any prime p and integer x, if x² ≡ 1 (mod p) then x ≡ 1 (mod p) or x ≡ -1 (mod p).
 Hint: For any x, (x² -1) = (x+1)(x-1).
- 6. Show that if gcd(a,m) > 1 then the equation $a^x \equiv 1 \pmod{m}$ is not solvable for any integer x > 0.
- 7. Show that the equation $x^2 = y^2 = 4z 1$ has no solutions where x,y and z are integers. Hint: Use mod 4 arithmetic and consider the values of $(2w)^2 \mod 4$ and of $(2w + 1)^2 \mod 4$ for any integer w.
- 8. A restaurant sells chicken wings in order of size 9 and 20. What is the largest number of chicken wings that you cannot order exactly ?
- 9. Note: A number b is called a primitive element of Z_m if the set $\{0, b, b^2, ..., b^{m-1}\}$ is a complete set of representatives of Z_m .
 - i. Find a primitive element of Z_{11} , and verify your answer.
 - ii. Find all the primitive roots (mod 7) which are between 0 and 7, verify your answers.
- 10. Assume S is a complete set of representatives for Z_m and that a is such that (a,m) = 1, then prove that $aS = \{ as | s \in S \}$ is also a complete set of representatives for Z_m .
