We are pleased to announce a series of distinguished lectures in celebration of the 20th anniversary of the Boston University Computer Science Department. Please join us for the celebration and help us look ahead to continued growth and excellence.

The Computer Science Department at Boston University was established in 1982 as part of the College of Arts and Sciences. Today, it consists of 17 faculty members who teach and conduct research in diverse areas of theoretical, experimental, and applied computer science.

BUCS faculty includes leading researchers in many key areas of computer science. Current research focuses on algorithms, computational geometry, cryptography, databases and data mining, fault-tolerant computing, image and video computing, networking, operating systems, performance evaluation, programming languages, real-time systems, security, theory of computation, and web and internet systems.
