Jingyi Zhang,  
Zhuoqun  
Cheng

### Introduction

### Quest RTOS

### Background Scheduling

### Memory- Aware Scheduling

### Multicore VCPU Scheduling

### Evaluation

### Conclusion

- Multicore platforms are gaining popularity in embedded and real-time systems
  - concurrent workload support
  - less circuit area
  - lower power consumption
  - lower cost

# Motivation

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

### Introduction

### Quest RTOS

### Background Scheduling

### Memory- Aware Scheduling

### Multicore VCPU Scheduling

### Evaluation

### Conclusion

- Multicore platforms are gaining popularity in embedded and real-time systems
  - concurrent workload support
  - less circuit area
  - lower power consumption
  - lower cost
- Complex on-chip memory hierarchies pose significant challenges for applications with real-time requirements

# Motivation

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

### Introduction

### Quest RTOS

### Background Scheduling

### Memory- Aware Scheduling

### Multicore VCPU Scheduling

### Evaluation

### Conclusion

- Shared cache contention:
  - page coloring
  - hardware cache partitioning (Intel CAT)
  - static VS dynamic

# Motivation

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Shared cache contention:
  - page coloring
  - hardware cache partitioning (Intel CAT)
  - static VS dynamic
- Memory bus contention:
  - bank-aware memory management
  - memory throttling

# Contribution

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

## Introduction

## Quest RTOS

## Background Scheduling

## Memory- Aware Scheduling

## Multicore VCPU Scheduling

## Evaluation

## Conclusion

- We proposed the use of foreground (reservation) + background (surplus) scheduling model
  - improves application performance
  - effectively reduces resource contention
  - well-integrated with real-time scheduling algorithms

# Contribution

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

## Introduction

## Quest RTOS

## Background Scheduling

## Memory- Aware Scheduling

## Multicore VCPU Scheduling

## Evaluation

## Conclusion

- We proposed the use of foreground (reservation) + background (surplus) scheduling model
  - improves application performance
  - effectively reduces resource contention
  - well-integrated with real-time scheduling algorithms
- We proposed a new bus monitoring metric that accurately detects traffic

# Application

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Imprecise computation/Numeric integration
  - MPEG video decoding: mandatory to process I-frames, optional to process B- and P-frames to improve frame rate

# Application

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Imprecise computation/Numeric integration
  - MPEG video decoding: mandatory to process I-frames, optional to process B- and P-frames to improve frame rate
- Mixed-criticality systems running performance-demanding applications
  - machine learning
  - computer vision

# Quest RTOS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- VCPU model (C, T) in Quest RTOS
  - C: Capacity
  - T: Period
- Partitioned scheduling using RMS
- Schedulability test
$$\sum_1^n \left(\frac{C_i}{T_i}\right) \leq n(\sqrt[n]{2} - 1)$$

# Background Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

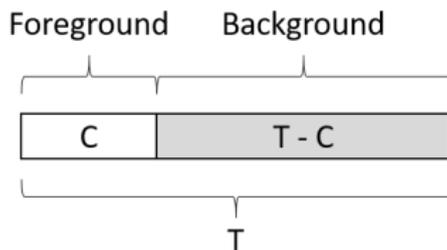

Memory-  
Aware  
Scheduling

Multicore  
VCPUs  
Scheduling

Evaluation

Conclusion

- VCPU enters background mode upon depleting its budget (C)

# Background Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

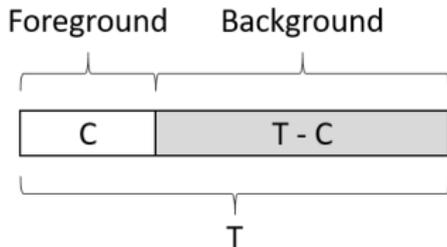

Memory-  
Aware  
Scheduling

Multicore  
VCPUs  
Scheduling

Evaluation

Conclusion

- VCPU enters background mode upon depleting its budget (C)

- Core enters background mode when all VCPUs are in background mode

# Background Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

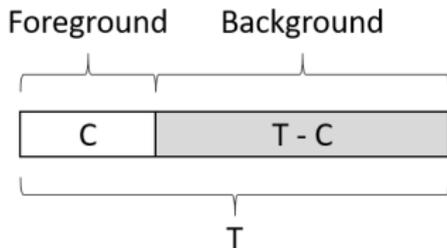

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- VCPU enters background mode upon depleting its budget (C)

- Core enters background mode when all VCPUs are in background mode
- Background CPU Time (**BGT**): time a VCPU runs when core in background mode

# Background Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

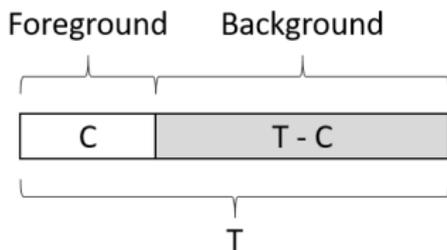

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- VCPU enters background mode upon depleting its budget (C)

- Core enters background mode when all VCPUs are in background mode
- Background CPU Time (**BGT**): time a VCPU runs when core in background mode
- Background scheduling: schedule VCPUs when core is in background mode
  - fair share of **BGT** amongst VCPUs on core

# DRAM structure

MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

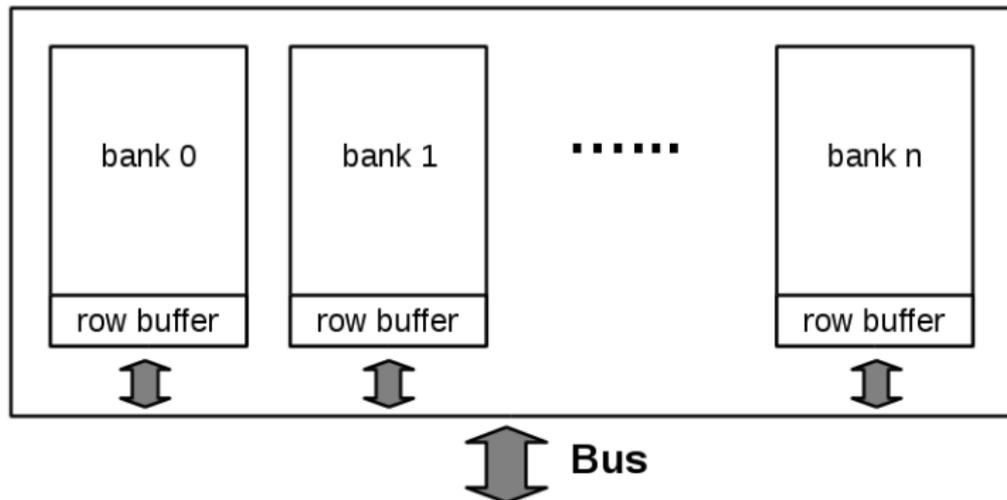

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

## DRAM

# Memory-Aware Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

**Memory-  
Aware  
Scheduling**

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Prior work [MemGuard] uses "Rate Metric":  
number of DRAM accesses over a certain period

# Memory-Aware Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Prior work [MemGuard] uses "Rate Metric":  
number of DRAM accesses over a certain period
  - Bank-level parallelism

# Memory-Aware Scheduling

## MARACAS

Ying Ye,

Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Prior work [MemGuard] uses "Rate Metric":  
number of DRAM accesses over a certain period
  - Bank-level parallelism
  - Row buffers
  - Sync Effect

# Sync Effect

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

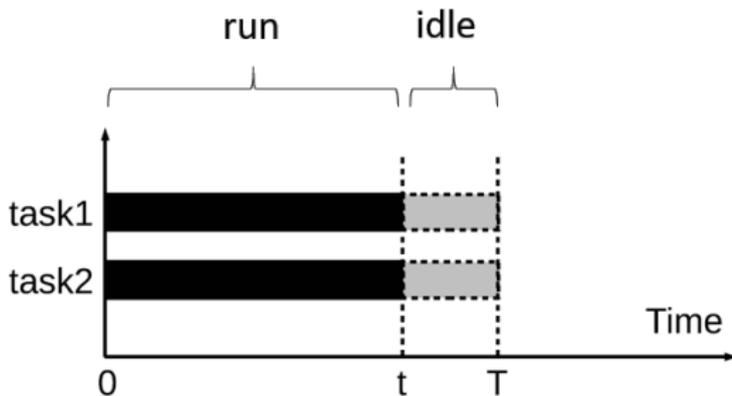

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

# Sync Effect

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

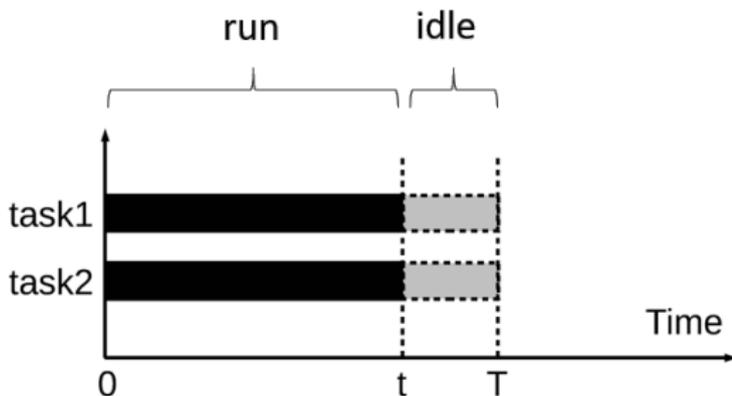

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Each task reduces its access rate by a factor of  $(T-t)/T$
- Contention in  $[0, t]$  remains the same

# Latency Metric

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

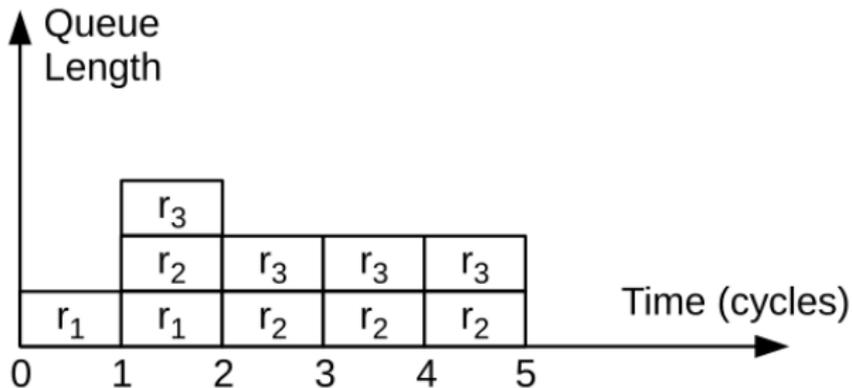

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- $requests = 3$ ,  $occupancy = 10$

# Latency Metric

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

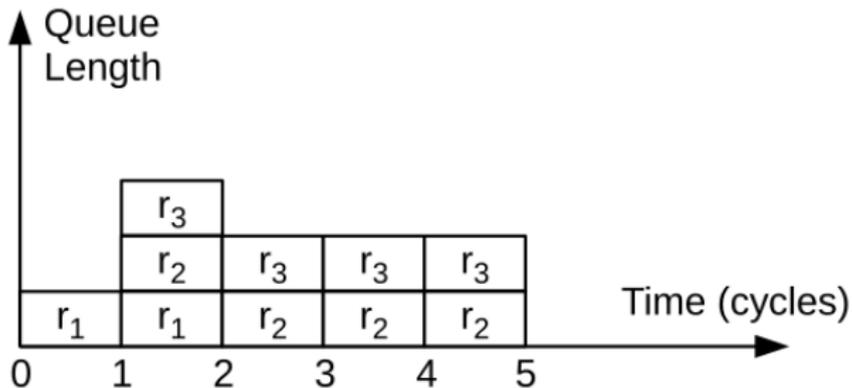

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- $requests = 3$ ,  $occupancy = 10$
- $latency = \frac{10}{3} = 3.3$

# Latency Metric

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- `UNC_ARB_TRK_REQUEST.ALL` (**requests**):  
counts all memory requests going to the memory controller request queue
- `UNC_ARB_TRK_OCCUPANCY.ALL` (**occupancy**):  
counts cycles weighted by the number of pending requests in the queue

# Latency Metric

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- `UNC_ARB_TRK_REQUEST.ALL` (**requests**):  
counts all memory requests going to the memory controller request queue
- `UNC_ARB_TRK_OCCUPANCY.ALL` (**occupancy**):  
counts cycles weighted by the number of pending requests in the queue
- Average latency:  
$$latency = \frac{occupancy}{requests}$$

# Memory Throttling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

**Memory-  
Aware  
Scheduling**

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- When core gets throttled, background scheduling is disabled

# Memory Throttling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- When core gets throttled, background scheduling is disabled
- Latency threshold: `MAX_MEM_LAT`  
**if** *latency*  $\geq$  `MAX_MEM_LAT` **then**  
*num\_throttle* ++

# Memory Throttling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- When core gets throttled, background scheduling is disabled
- Latency threshold: `MAX_MEM_LAT`  
**if** *latency*  $\geq$  `MAX_MEM_LAT` **then**  
*num\_throttle* ++
- Proportional throttling
  - Every core is throttled at some point
  - Throttled time proportional to core's DRAM access rate

# Predictable Migration

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

# Predictable Migration

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

- Run migration thread with highest priority on each core: pushing local VCPUs to other cores (starts from highest utilization ones)

# Predictable Migration

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

- Run migration thread with highest priority on each core: pushing local VCPUs to other cores (starts from highest utilization ones)
- Only one migration thread active during a migration period

# Predictable Migration

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Run migration thread with highest priority on each core: pushing local VCPUs to other cores (starts from highest utilization ones)
- Only one migration thread active during a migration period
- Its execution of its entire capacity  $C$  does not lead to any other local VCPUs missing their deadlines

# Predictable Migration

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Run migration thread with highest priority on each core: pushing local VCPUs to other cores (starts from highest utilization ones)
- Only one migration thread active during a migration period
- Its execution of its entire capacity  $C$  does not lead to any other local VCPUs missing their deadlines
- Constraint on  $C$ :

$$C \geq 2 \times E_{lock} + E_{struct}$$

# VCPU Load Balancing

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

- For every core, define Slack-Per-VCPU (**SPV**):

$$SPV = \frac{1 - \sum_1^n (C_i / T_i)}{n}$$

# VCPU Load Balancing

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

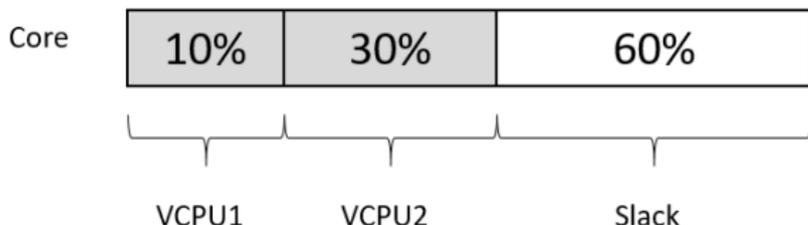

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- For every core, define Slack-Per-VCPU (**SPV**):

$$SPV = \frac{1 - \sum_1^n (C_i / T_i)}{n}$$

$$SPV = \frac{1 - (10\% + 30\%)}{2} = 30\%$$

# VCPU Load Balancing

MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

- Balance Background CPU Time (**BGT**) used by every VCPU across cores: equalize **SPVs** of all cores

# VCPU Load Balancing

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

- Balance Background CPU Time (**BGT**) used by every VCPU across cores: equalize **SPVs** of all cores
  - **BGT** fair sharing

# VCPU Load Balancing

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Balance Background CPU Time (**BGT**) used by every VCPU across cores: equalize **SPVs** of all cores
  - **BGT** fair sharing
  - balanced memory throttling capability on each core

# VCPU Load Balancing

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

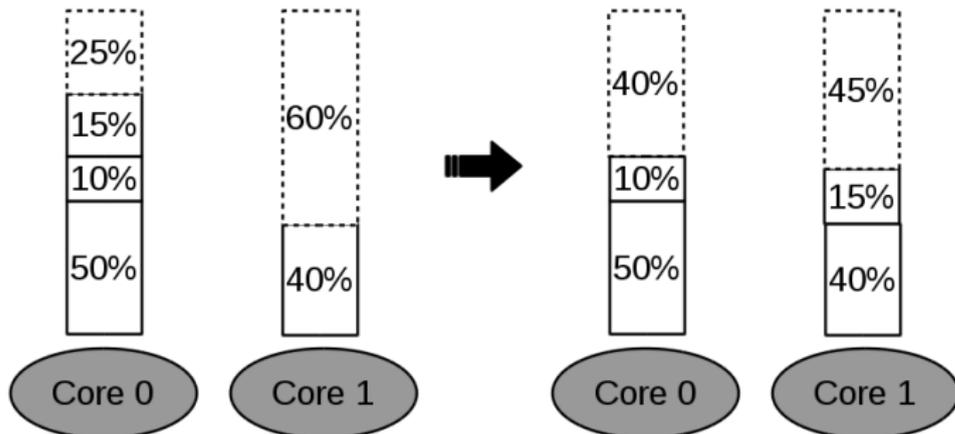

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Balance Background CPU Time (**BGT**) used by every VCPU across cores: equalize **SPVs** of all cores
  - **BGT** fair sharing
  - balanced memory throttling capability on each core

# Cache-Aware Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

**Multicore  
VCPU  
Scheduling**

Evaluation

Conclusion

- Static cache partitioning amongst cores
  - page coloring

# Cache-Aware Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Static cache partitioning amongst cores
  - page coloring
- New API:  
*bool vcpu\_create(uint C, uint T, uint cache);*

# Cache-Aware Scheduling

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Static cache partitioning amongst cores
  - page coloring
- New API:  
*bool vcpu\_create(uint C, uint T, uint cache);*
- Extension of VCPU Load Balancing:  
destination core meets the cache requirement

# Evaluation

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

**Evaluation**

Conclusion

- MARACAS running on the following hardware platform:

<b>Processor</b>	Intel Core i5-2500k quad-core
<b>Caches</b>	6MB L3 cache, 12-way set associative, 4 cache slices
<b>Memory</b>	8GB 1333MHz DDR3, 1 channel, 2 ranks, 8KB row buffers

# Rate VS Latency

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Micro-benchmark m\_jump:  
*byte array[6M];*  
*for (uint32 j = 0; j < 8K; j += 64)*  
*for (uint32 i = j; i < 6M; i += 8K)*  
*< Variable delay added here >*  
*(uint32)array[i] = i;*

# Rate VS Latency

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Micro-benchmark m\_jump:  
*byte array[6M];*  
*for (uint32 j = 0; j < 8K; j += 64)*  
*for (uint32 i = j; i < 6M; i += 8K)*  
*< Variable delay added here >*  
*(uint32)array[i] = i;*
- Three m\_jump (task 1,2,3) running on separate cores without memory throttling, utilization (C/T) 50%

# Rate VS Latency

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Micro-benchmark m\_jump:  
*byte array[6M];*  
*for (uint32 j = 0; j < 8K; j += 64)*  
*for (uint32 i = j; i < 6M; i += 8K)*  
*< Variable delay added here >*  
*(uint32)array[i] = i;*
- Three m\_jump (task 1,2,3) running on separate cores without memory throttling, utilization (C/T) 50%
- Each run, insert a different time delay in task1 and task2, task3 has no delay

# Rate VS Latency

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Record the total memory bus traffic, average memory request latency and task3's instructions retired in foreground mode:

# Rate VS Latency

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Record the total memory bus traffic, average memory request latency and task3's instructions retired in foreground mode:

	Bus Traffic (GB)	Latency	<i>task3</i> Instructions Retired ( $\times 10^8$ )
H	1128	228	249
M	1049	183	304
L	976	157	357

# Rate VS Latency

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Record the total memory bus traffic, average memory request latency and task3's instructions retired in foreground mode:

	Bus Traffic (GB)	Latency	<i>task3</i> Instructions Retired ( $\times 10^8$ )
H	1128	228	249
M	1049	183	304
L	976	157	357

- Setting comparable thresholds:
  - rate-based: derived from Bus Traffic (1128/time)
  - latency-based: from Latency (228)

# Rate VS Latency

## MARACAS

Ying Ye,  
Richard West,  
Jingyi Zhang,  
Zhuoqun  
Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- Record the total memory bus traffic, average memory request latency and task3's instructions retired in foreground mode:

	Bus Traffic (GB)	Latency	<i>task3</i> Instructions Retired ( $\times 10^8$ )
H	1128	228	249
M	1049	183	304
L	976	157	357

- Setting comparable thresholds:
  - rate-based: derived from Bus Traffic (1128/time)
  - latency-based: from Latency (228)
- Last column serves as reference, showing the **expected** performance of task3 using the corresponding thresholds

# Rate VS Latency

Cheng

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- MARACAS uses background time to improve task performance; when memory bus is contended, it gets disabled through throttling

# Conclusion

## MARACAS

Introduction

Quest RTOS

Background  
Scheduling

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- MARACAS uses background time to improve task performance; when memory bus is contended, it gets disabled through throttling
- MARACAS uses a latency metric to trigger throttling, outperforming prior rate-based approach

# Conclusion

## MARACAS

Memory-  
Aware  
Scheduling

Multicore  
VCPU  
Scheduling

Evaluation

Conclusion

- MARACAS uses background time to improve task performance; when memory bus is contended, it gets disabled through throttling
- MARACAS uses a latency metric to trigger throttling, outperforming prior rate-based approach
- MARACAS fairly distributes background time across cores, for both fairness and better throttling
