Boston University refuses NHL request for CTE research records

By Rick Westhead

The National Hockey League is fighting Boston University CTE Center over the research department's refusal to turn over records related to its study on the brains of deceased professional athletes.

In a Jan. 19 filing with U.S. federal court in Minneapolis, lawyers for the NHL asked the court to order the school to produce those documents. The dispute is related to a lawsuit filed by more than 100 former NHL players against the league arguing that it has put its profits ahead of their health.

"BU objects to the production of documents concerning the study of the brains of hockey players whose families declined to authorize the release of such information or [those] whose participation was conditioned upon assurances of confidentiality."

BU letter to NHL, 10/26/2015

Can the court get an answer to NHL query without forcing BU to break its promise?

A True Story

April 9, 2013

WOMEN'S WORKFORCE COUNCIL

The Women's Workforce Council was established by Mayor Thomas M. Menino on April 9th, 2013— known nationwide as Equal Pay Day. The day marks how far into 2013 women need to work to earn what men earned in 2012. The first of its kind in the country, the Council's mission is to help transform Boston into the best city in the country for working women.

Members of the Council represent the financial, engineering, medical, law, technology and retail sectors, and include small business owners, entrepreneurs, senior executives, as well as academic, labor and nonprofit leaders.

Boston Women's Workforce Council

The mission of the Boston Women's Workforce Council, original 2013, is to close the gender wage gap and remove the visible a women's advancement in today's working world. The Council, c leaders in the private sector, academia, non-profit organization works with the businesses in the Greater Boston area in a public ensure that 100% of the talent pool is used to make Greater Bo for working women in America.

December 11, 2013

100% TALENT

The Boston Women's Compact

To make Greater Boston the premier place for working women in America, by closing the wage gap and removing the visible and invisible barriers to women's advancement. By doing so, we will build a more equitable workforce where all talent is cultivated and valued.

GOAL 3

Evaluating Success

Employers agree to participate in a biennial review to discuss successes and challenges, as well as contribute data to a report compiled by a third-party on the Compact's success to date. Employer-level data would not be identified in the report. The specific data to be reported will build on data already required by federal and state authorities and should not create an additional reporting burden.

In DC, with Massachusetts 5th District (my district) Representative Congresswoman Katherine Clark -- a true advocate for NSF funding and for gender pay equity. I was there to tell her how these two got connected through an Institute project!

Scientists learn to reach audiences

On a recent morning, Bestavros and a Washington lobbyist for BU sat in the Capitol Hill office of Representative Katherine Clark, a Massachusetts Democrat on the House committee that oversees funding for the National Science Foundation.

Bestavros wanted to thank her for pushing for recent funding, impress upon her the importance of continued support, and arm Clark with ammunition for future budget and policy fights.

"I don't want to bore you with the details of what we do," he said, before launching into a story of how he uses cloud com-

Computer science professor Azer Bestavros explained his work to Representative Katherine Clark in Washington.

The Boston Globe

The congresswoman, who had signed onto a bill addressing income disparity between men and women, was impressed by the relevance he outlined. *"It's linking it back for the members of Congress,"* Clark said. *"Nobody would think, oh, the Paycheck Fairness Act, how is that tied into NSF funding?"* The meeting was slated for 15 minutes. It lasted 25.

Evidence-Based Policy Act Could Change How Feds Use, Share Data

by Tobias Naegele | Nov 29, 2017

As government CIOs try to get their arms around how the Modernizing Government Technology (MGT) Act will affect their lives and programs, the next big IT measure to hit Congress is coming into focus: House Speaker Paul Ryan’s (R-Wis.) “Foundations for Evidence-Based Policymaking Act of 2017.”

A bipartisan measure now pending in both the House and Senate, the bill has profound implications for how federal agencies manage and organize data – the keys to being able to put data for informed policy decisions into the public domain in the future. Sponsored by Ryan in the House and by Sen. Patty Murray (D-Wash.) in the Senate, the measure would:

Wyden, Rubio, Warner Introduce “Student Right to Know Before You Go Act” to Empower Students as Consumers and Showcase New Privacy-Protecting Technology

Updated Legislation Allows Students and Families to Make Informed Decisions about How to Spend Their Higher Education Dollars; Protects Student Privacy By Featuring Encrypted, Secure Multi-party Computation

“We are excited to see legislation promoting the use of multi-party computation (MPC) in formulating sound public policy. Boston University’s successful collaboration with the City of Boston and the Boston Women’s Workforce Council brought this technology into practice to maintain data privacy while gaining insight into an important societal issue -- potential wage inequality in private industry. Such applications demonstrate that MPC can bring enormous value to policymakers at all levels of government.”

-- Azer Bestavros (on behalf of the team from BU)

BU

The Rafik B. Hariri Institute for Computing and Computational Science & Engineering

Azer Bestavros: Sharing Knowledge without Sharing Data -- On the false choice between privacy and utility of information

20

Multi-Party Computation (MPC)

What is it?

- Given multiple parties p_1, p_2, \dots, p_n each with private data x_1, x_2, \dots, x_n
- Parties engage in computing a function $f(x_1, x_2, \dots, x_n)$
- Nothing is revealed about the inputs beyond what the output of f reveals
- What f leaks is an orthogonal question, e.g., the realm of “differential privacy”

State of the Art

- Theory known since 1979, with Shamir’s “How to share a secret”
- Frameworks and libraries increasingly available over the last few years ...
- Experience with use cases involving real applications is limited
- Deployments are not easily portable

Shamir Secret Sharing (1979): The Basic Math

→ Need $k + 1$ points to define polynomial of degree k

- To share a “secret” among k parties, make it the free coefficient of a polynomial $f(x)$ of degree k
- Select coefficients a_1, a_2, \dots, a_k of $f(x)$ at random
- Give party P_i a “share” of the secret – namely, $f(i)$
- To reconstruct the “secret” all parties need to combine their shares to find the secret – namely $f(0)$

Notes

- Need to use finite field arithmetic to provably avoid any leakage
- Approach allows secret sharing among any number of parties; any subset k can uncover the secret
- Other approaches have been proposed, most notably the use of garbled circuits

Multiparty Computing on Secret Shares

Any arbitrary function is a circuit of additions & multiplications

→ Addition is easy!

- Sum of secrets is represented by $f(x) = f_1(x) + f_2(x)$
- To compute $f(x)$, each party adds its shares of $f_1(x)$ and $f_2(x)$
- Using one round of k messages, sum of secrets can be revealed

→ Multiplication is not that easy...

- Multiplication of secrets is represented by $f(x) = f_1(x) * f_2(x)$
- Requires $O(k)$ rounds of communications – could be very expensive!

Research Projects @ Boston University

Develop new MPC primitives, toolkits, and optimizations

- Efficient shortest-path algorithms operating over private subgraphs
- Efficient analytics/personalization over private geo-temporal data
- PL and compiler frameworks to expose privacy-utility tradeoffs

Develop MPC “as a service” solutions in various settings

- Web/browser-based MPC as a service platform
- Spark-based MPC platform for Map-Reduce analytics
- Incorporate MPC in big-data cloud workflow management

Data Marketplace: Stakeholders & Interfaces

The diagram illustrates the interactions in a Data Marketplace. Contributors provide data and policies to a central Brokers & Markets hub. Data Analysts define algorithms and performance criteria, which are then used by the hub to query data. Compute Service Providers ingest secret-shared data and perform MPC computations. Code Distributors provide code to contributors and service providers, which is then used by the hub to execute algorithms. The hub also manages policies and results.

Contributor

- Makes data available
- Sets/chooses policies

Broker or Market

- Identifies data contributors and analysts that have mutually compatible analysis algorithms/data policies
- Helps data contributors craft or choose from possible policies, and helps analysts choose algorithms

Data Analyst

- Defines analysis algorithms
- Chooses performance criteria
- Examines results

Compute Service Provider

- Ingests and stores secret-shared data
- Performs MPC computations
- Optimizes where policies allow

Code Distributor

- Distributes code to contributors and/or service providers
- Provides assurance or auditing that code is from the right analyst

27

Take-Home Message: You can have it both ways

We can derive knowledge (K) from data (x_1, x_2, x_3, \dots) without requiring owners of the data to share it or to trust anything other than mathematics under some assumptions about threats

$$K = f(\text{TOP SECRET CONFIDENTIAL TOP SECRET}, \text{TOP SECRET CONFIDENTIAL TOP SECRET}, \text{TOP SECRET CONFIDENTIAL TOP SECRET}, \dots)$$

The Rafik B. Hariri Institute for Computing and Computational Science & Engineering

Azer Bestavros: Sharing Knowledge without Sharing Data -- On the false choice between privacy and utility of information

28

Take-Home Message: Societal Implications

- Privacy/confidentiality concerns should not be used as excuses to deny society the right to answer important questions
- Privacy/confidentiality should not be sacrificed in the name of doing the right thing, or advancing science, or applying the law
- Private data should not be a tradable commodity; computation over private data should be what we offer “for sale”
- Substantial social/financial value can be gained in contexts imposing legal or policy restrictions on sharing raw data
